

Quality & Environmental Policy

We are a supplier of value-creating solutions in personal safety, consumables for industry, service. Retailers and the public sector.

By analyzing customer's need and requirements, we continuously develop our operation and business relations. In our efforts to support sustainable development, we are continually looking for and developing new methods, products and efficient logistical solutions that have as little environmental impacts as possible. With high availability and an advisory role, we offer solutions of the right quality.

Quality and environmental work are integral parts of our organization. A close, mutually developmental collaboration with carefully selected suppliers helps us to meet our own and our customer's requirements. With good knowledge of environmental issues and how they affect our customers and suppliers, we create added value in our business relations, while also reducing energy and resource consumption. We strive continuously to develop and improve our employee's competence and foster their dedication.

Compliance with relevant legislation, and other requirements is a natural part of everything we do.
